DETAILED ACTION

Claims 1-10 and 12-39 are pending for examination.

Claim 11 is cancelled.

Claims 1-10 and 12-39 are allowed.

Allowable Subject Matter

1. Claims 1-10 and 12-39 are allowed.

The following is an examiner's statement for reasons for allowance:

2. The closest prior art cited is Lund (US 2003/0078999). Lund discloses a method for provisioning a device in a virtual circuit network including receiving a list of virtual circuit identifiers, and applying each identifier to connect to a remote device (paragraph 20), where each identifier is iteratively tested for connectivity and when providing connectivity is chosen to be the primary virtual circuit (paragraph 36). In combination with cited reference Arndt (US 6 826 611), the two pieces of prior art reasonably suggest iteratively applying commands for establishing connectivity by way of receiving an IP address from a terminating device and setting an IP address based on the other device's IP address in addition to iteratively applying virtual circuit identifiers.
3. The prior art reference of record do not teach alone or reasonably suggest in combination all of the limitations together within independent claim 1 (and therefore independent claims 12, 22, and 30). For example, the independent claims contains the limitations of requesting information from a device information corresponding to virtual circuit identifiers, where the device is a termination point of a virtual circuit, and the device terminating the virtual circuit is further configured to be operable to route

messages from the originating device to a remote device, and the remote device is operable to provide configuration information to the originating device. Lund and Arndt generally teach connecting to an end device and configuring the originating device based on the termination device's configuration settings. Lund generally teaches utilizing the termination device's virtual circuit identifiers to form a connection, while Arndt generally teaches utilizing the termination device's IP address to configure the originating device's IP address within a subnet, but neither, along with other previously cited art, teach alone or reasonably suggest the combination of all the limitations recited in the independent claims. Therefore, independent claims 1, 12, 22, and 30 contain allowable subject matter and are allowable, along with their dependent claims, over the prior art of record.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comment on Statement of Reasons for Allowance."
